Emergency Trauma Bandage

Please read instructions for use before use and follow the instruction.

Product description

This product is a single-handed wound covering dressing composed of medical-grade polyurethane foam, an elastic bandage, and a fixation component.

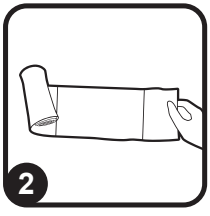
The polyurethane foam is applied directly over the wound and provides high absorption of wound exudate. Its non-strike-through property helps maintain an appropriately moist wound environment. The elongated elastic bandage can be wrapped around the wound to provide secure fixation and compression for hemostasis. The fixation component facilitates one-handed application, and the indicator strip helps identify the amount of fluid absorbed by the foam and assess the appropriate time for dressing replacement.

By combining exudate absorption, compression fixation, and visual indication, this multifunctional foam dressing makes wound care simpler and more convenient.

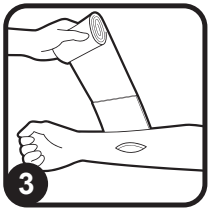
- Suitable for dressing the extremities, torso, head, and neck of the human body.
- High absorbency: highly absorbent polyurethane foam.
- Compression and support: the polyurethane foam and bandage are elastic, providing compression and support to the wound.
- Ease of use: can be operated with one hand.
- Adjustable and securable at the wound site for compression and hemostasis.

Instructions for use

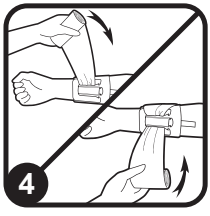
Place the product under the armpit, then tear open the package downward to remove it.



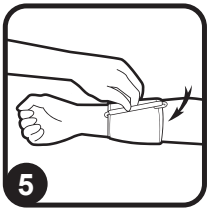
Remove and unroll the bandage roll, avoiding contact of your fingers with the dressing surface.



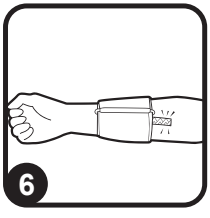
Position the foam over the wound and secure the dressing in an appropriate place around the wound.



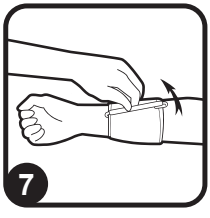
Wrap the bandage around the wound and insert it into one side of the E-shaped groove on the compression pad. Then pull it tight in the opposite direction and wrap it to the groove on the other side and insert it again. Continue wrapping in the opposite direction until the fixation rod at the end of the bandage roll is exposed.



Hook both ends of the fixation rod onto the edges of the bandage to secure it in place.



Replace if the indicator strip changes color.



When removing or replacing the bandage, please loosen the fixation rod first.

Indications for use

Suitable for open wounds caused by external force, such as general trauma, wounds with mild to moderate exudate, and traumatic wounds. It is intended for dressing the extremities, torso, head, and neck of the human body.

Main ingredients

Polyurethane foam, Elastic bandage, E-type fixation componet closure bar and indicator tap.

Specification

REF	Bandage Size	Packaging
P7-008-61-Y	20×450cm	1pc/ bag

Contraindications

Do not use if you have a known allergy or have previously experienced an allergic reaction to this product or any of its ingredients.

Precautions

1. ***For external use only. Please read the instructions for use before using this product.***
2. ***This product is sterilized by irradiation. Inspect the packaging before use; do not use if the package is damaged.***
3. ***This product is intended for emergency rescue use. After application and dressing, seek medical attention as soon as possible.***
4. ***This product is for single use only. Discard after use. Do not resterilize or reuse, as this may increase the risk of wound infection.***
5. ***If discomfort occurs during use, discontinue use and seek medical attention.***
6. ***This product is not washable. Store in a cool, dry place and avoid direct sunlight.***
7. ***This product does not contain any drugs, biologics, or animal-derived materials.***
8. ***Avoid direct sunlight. Store at room temperature and keep dry.***
