FAQ

Q : Is it effective against old scars?

If the scar was formed more than 6 months, the scar tissue has became hyperplastic. Continued use of TAICEND product still has the effect of partially softening and diluting scars but does not completely eliminate scars.

Q : If I had keloid constitution?

In the case of keloid, hypertrophic scars generate on the third to sixth month. Therefore, it is highly recommended to follow the timing of use, and continue to use it for more than 6 months.

Waterproof | hypoallergenic | breathable | long-lasting adhesion | soft & comfortable

Latest Patented Technology for Precise Care

Integrating Innovative Materials | Biotechnology | Clinical Medicine

Inflammatory Phase

STAGE 1
TAICEND
Waterproof Anti-Adhesion
Wound Dressing (Sterile)

4 pieces

Change the dressing every two days

Designed with patented foam dressing technology, it effectively absorbs post-surgical wound exudate without backflow, keeping the wound moist and clean while reducing the risk of infection.

Proliferative Phase

STAGE 3
TAICEND
Scar Care
Dressing

5 pieces

Change the dressing once a week from week 7th to 26th

With appropriate pressure, it helps reduce excessive tissue growth, maintains optimal hydration for both scars and surrounding skin, and softens scars. Comfortable and hypoallergenic, it allows for uninterrupted use.

Remolding Phase

STAGE 2
TAICEND
Surgical
Hydrogel Patch (Sterile)

5 pieces

Change the dressing once a week from week 2nd to 6th

The soft and highly stretchable inner hydrolgel layer minimizes pain from movement and tension, preventing excessive tissue proliferation. Comfortable and hypoallergenic, it can be used continuously.

10g

Enhance Scar Lightening
TAICEND
Scar Gel

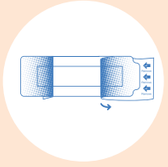
Solution 1

7 to 26 weeks
The scar care dressing is used for 6 days, and the scar gel can be used in the morning and evening after a day off

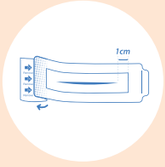
Solution 2

After 26 weeks
You can continue to use the scar gel morning and night

Simple 3 Steps, Easy to Apply!



Remove the release liner from the adhesive side.



Align the dressing with the wound.

Peel off the top release liner, smooth it out, and press gently from the center outward to secure the waterproof film and ensure a firm seal.

Caesarean Postoperative Care

Your perfect healing outcome after 26 weeks

Treatment for C-section 1 2 3

STAGE 1 In Hospital
