Positive Feedback

A Postpartum Care Center in Taipei

Caring for a newborn's delicate skin can be a challenge for many parents. In addition to learning proper skincare methods from postpartum care centers, choosing highly breathable diapers, changing them frequently, and keeping the baby dry are essential steps.
Since using TAICEND BB-Barrier Film, parents have found it helps prevent diaper rash while protecting their baby's delicate skin—achieving multiple benefits in one simple step!

Pediatrician,
National Yang Ming Chiao Tung University Hospital

In clinics, it's common to see babies visiting due to diaper rash. Even with meticulous care from parents, a baby's delicate skin is highly susceptible to inflammation of varying severity caused by heat, poor breathability, and friction from contact with urine and stool.

TAICEND BB-Barrier Film is incredibly easy to use and effectively shields the baby's skin from external irritants—taking the first step toward healing diaper rash!

Integrated Wound Therapy,
China Medical University Beigang Hospital

In clinical settings, patients often experience mild skin redness and irritation due to allergies, as well as issues caused by heat, humidity, and prolonged moisture in their work and living environments.

TAICEND BB-Barrier Film provides a protective barrier while incorporating B5 for hydration and skin repair, helping to soothe discomfort and reduce excessive moisture—making it an essential item for home care.

Baby Bum's Helper

What should I do, if there are rashes on baby's bum?

First tips: Using warm water instead of wet wipes to reduce friction.

Many moms might skip the cleaning steps during diaper changing, which might leave poop or peep residue on the baby's skin. Or using wet wipes to replace water to clean, which increase friction on baby's delicate skin. Losing the protection layer of the skin might result in irritated skin

Second tips: Choose the right diaper and change it frequently.

Choose the right diaper: baby's stool and urine could irritate the skin; therefore, it's better choose the clean, soft and high absorbed diaper.Change diapers frequently: If the diaper doesn't get change on time, it might cause bacterial growth and irritation from stool and urine even with a high absorbed diaper.

Third tips: Stay refreshing

All skin need protection; therefore, BB Barrier form a protective barrier on baby's skin, it reduces friction and stay refreshing.
