Protective Wound Cleansing Mousse

Is it really clean?

Besides providing gentle cleansing, the delicate mousse thoroughly moisturizes and softens dirt, enhancing cleaning effectiveness.

How long does one bottle last on average?

It is recommended to use with each diaper change. Each bottle can last at least 2–4 weeks, depending on individual usage habits and amount used.

Are there any issues with long-term use?

This product has passed hypoallergenic and non-toxic tests, making it safe for long-term use. Prolonged use effectively provides gentle cleansing, maintains skin barrier function, and protects vulnerable skin.

Medshield Invisible Film

How long does one bottle typically last?

It is recommended to use with each diaper change. Each bottle can last at least 2–4 weeks, depending on individual usage and habits.

When should I reapply?

After using the painless invisible protective film, a transparent protective layer forms on the skin. It is recommended to reapply after each cleansing.

Will it remain on the skin?

The protective film can be removed through normal skin turnover or regular cleansing (e.g., body wash). It does not easily accumulate on the skin, making it suitable for long-term use to protect vulnerable skin.

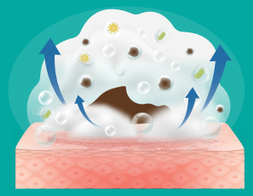
1 Clean 2 Protect

Protects delicate mature skin Simple 2 Steps

STEP 1

Protective Wound Cleansing Mousse

Shake 5 times, press gently, and spray vertically at 90°

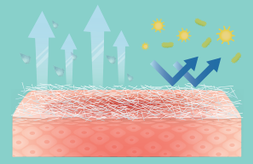


Traps dirt, cleans deep, cleans completely

STEP 2

Medshield Invisible Film

Shake twice, spray evenly, dries in 5 seconds with optimal protection



Provides protective barrier, reduces irritation, and restores skin barrier

Cleaning is key, **Protection** is even more important!

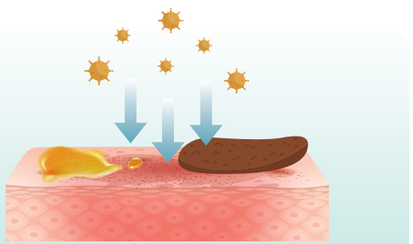
Preventive care in 2 easy steps for more efficient caregiving

Skin Protection Series

Simple 2 Steps

Soothes skin irritation caused by diaper wearing

What is damaging your skin barrier?



Skin damage caused by moisture

- Alkaline substances cause irritation and disrupt pH balance
- Prolonged diaper wear leads to heat and moisture buildup
- Aging skin has reduced defense and repair functions

Proper cleansing and protection help reduce skin damage

- Choose diapers with good absorbency and breathability, and change them frequently while checking the skin.
- Avoid rubbing back and forth; clean with a patting or dabbing motion using soft material wipes.
- After cleaning, apply protective and moisturizing products.
- Allow extra ventilation time when changing diapers.

Medical-grade dual protection

Alcohol-free | Antibiotic-free | Fragrance-free | Steroid-free

1 Clean — TAICEND Protective Wound Cleansing Mousse

Spec.	300ml
REF	L1-006

2 Portect — TAICEND Medshield Invisible Film

Spec.	100ml
REF	L3-021

STEP 1 Removes existing risk factors

Pain-free, non-irritating formula
Gently cleanses the skin to reduce discomfort

Softens and lifts dirt
The mousse formula moisturizes and loosens dirt, reaching deep into the skin for thorough, no-miss cleaning

Protects skin and maintains hydration
Hyaluronic acid and amino acids help enhance skin moisture and support overall skin health

STEP 2 Prevents entry of risk factors

Enhances skin barrier protection
Medical-grade silicone forms an effective water-resistant, skin-like layer that shields against external contaminants

Stabilizes epidermal condition and restores function
Vitamins E and B5 help maintain skin stability and combat free radicals

Nourishing formula replenishes aging skin
Provides essential skin lipids and moisturizing ingredients to strengthen and protect vulnerable skin

Highly effective cleansing & moisturizing ingredients

Poloxamer 188
Protects cells while providing effective cleansing

Hyaluronic acid/ Amino acid
Maintains skin hydration
Reduces tightness after cleansing

Alginate
Stabilizes foam and encapsulates dirt

Enhanced formula for aging skin

Jojoba oil
High skin compatibility, suitable for fragile and sensitive skin; provides excellent lipid replenishment

Olive oil
Rich in polyunsaturated fatty acids; natural antioxidant properties

Vitamin E & B5
Gentle repair; helps stabilize the wound environment

Tested through multiple professional evaluations

Both skin-friendly and protective

Providing comprehensive care for the health of aging skin
