Frequently Asked Questions

Does it contain fragrance?

This product does not contain any chemical fragrance. The light scent comes from natural moisturizing lipids.

Will it sting or irritate wounds?

The ingredients used in this product are low-irritation and alcohol-free, and it has passed cytotoxicity testing, so even sensitive skin can use it with confidence.

Should I rinse dirt from a wound before use?

If clean water is available, first rinse the wound to remove debris, then use this product for secondary cleansing after the debris has been removed. If clean water is not available, it is recommended to spray this product directly to moisten the debris and allow it to float up, then repeat this step several times to ensure the best cleansing effect.

Create foam 200 times

Greater cleansing area × reduced cleanser consumption

The fluffy foam can expand its volume by at least 20 times. It allows active ingredients to effectively contact the target and produce effect.50ml cleansing mousse can be pumped to produce foam up to 200 times.

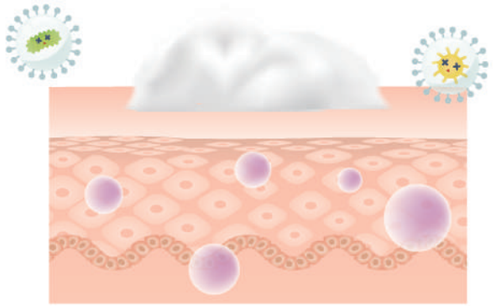
\ Keeps you worry-free when going out /

TAICEND
Baby Wound Protection Mousse

REF	L3-040
SPEC.	50ml

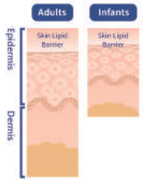
Gentle Cleansing
Non-irritating to wounds
Suitable even for fragile, sensitive skin



Cleanses without over-drying
Moisturizing and nourishing
Helps maintain skin hydration

Designed for children under 7

The skin barrier of children under 7 is relatively thin, and their barrier system is weaker, making them more vulnerable to direct contact with pathogens. Skin should be kept clean regularly to reduce the accumulation of pathogens and heavy metals.



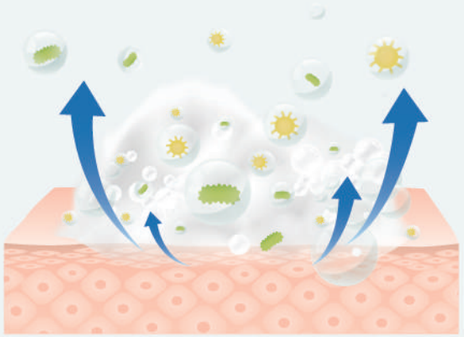
Protect against sweat and maintain strong wound protection

Escherichia coli
Present in feces and dirt; the most common cause of post-fall wound infections, which may lead to redness, swelling, and suppurative infection.

Pseudo-monas aerugi-nosa
Commonly found in ponds and puddles. If a wound becomes contaminated by standing water or remains wet for too long, the risk of infection increases.

Staphy-lococcus aureus
Mainly comes from contaminated ground surfaces. Outdoor grass, park sand pits, and other areas with poor hygiene require special attention to cleaning.

3D foam suspension technology easily lifts away dirt



Control the range of cleaning action

Appropriate foam durability can prevent the liquid from spreading and flowing out

Avoid physical injury

Foam can act as a buffer, reducing physical friction and pulling during cleaning

Ease skin burden

Reduce the irritation caused by excessive exposure to surfactants
